EDUCATION

NMIMS Indore **Aug 2023 - May 2027**
Computer Science and Engineering Indore, India

Progressive Education **Feb 2021 - Mar 2022**
Higher Secondary Indore, India

TECHNICAL SKILLS

- **Languages**: C++, Python, Java, JavaScript, SQL
- **Libraries & Frameworks**: PyTorch, TensorFlow, Flask, MERN Stack
- **Databases**: MySQL , Mongo DB, SQL
- **Systems & Networking:** TCP/IP, Packet Analysis, PCAP, TLS, Multi-threading, Flow Tracking
- **Tools & Platforms:** Git, GitHub, CMake, AWS, Google Cloud
- **Soft-Skills**: Rapport Building, Stakeholder Management, Cross-functional Collaboration

PROJECTS

FlowSentinel – Multi-threaded Deep Packet Inspection Engine | LINK **Feb 2026**

- Designed and implemented a high-performance Deep Packet Inspection (DPI) engine in C++ to analyse and filter real PCAP network traffic.
- Designed scalable multi-threaded architecture (Reader → Load Balancer → Fast Path → Output Writer) using thread-safe queues and consistent 5-tuple hashing to ensure flow-level accuracy.
- Engineered TLS SNI extraction logic to classify encrypted HTTPS traffic (YouTube, GitHub, Google, etc.) without decrypting payloads.
- Developed rule-based filtering system supporting IP, domain, and application-level blocking with structured traffic analytics reporting.

Community Resource Sharing Platform | LINK **Jun 2025**

- Built a full-stack MERN web platform enabling borrowing and lending of community resources, promoting sustainability and trust-based exchanges.
- Implemented authentication, user profiles, rating system, availability calendars, and automated notifications for transaction transparency.
- Integrated database-backed transaction history and scalable backend APIs for seamless resource management.

Text-to-Image Generator (Stable Diffusion) | LINK **Sep 2025**

- Developed an AI-powered text-to-image generation system using PyTorch and deployed via Flask-based interface.
- Optimized CUDA-based inference pipeline, reducing generation latency by ~40%.
- Implemented structured image storage and prompt-based generation workflow.

Handwritten Digit Recognition System | LINK **Sep 2025**

- Trained a Convolutional Neural Network on MNIST dataset achieving 98%+ accuracy.
- Built an interactive Tkinter GUI enabling real-time digit input and classification.
- Applied data preprocessing and augmentation techniques to improve model generalization.

CERTIFICATES

Machine Learning I – Columbia+ **Feb 2026**

- Gained strong understanding of supervised learning, regression, classification, model evaluation, and core machine learning principles.

Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate **Oct 2025**

- Demonstrated foundational knowledge of AI concepts, machine learning workflows, generative AI basics, and OCI-based AI services.

Cloud Computing – AWS (E&ICT Academy, IIT Kanpur) **Oct 2024**

- Acquired practical exposure to AWS cloud architecture, compute services, storage solutions, and scalable infrastructure deployment.

Google Cloud Computing Foundations & Generative AI **Jun 2025**

- Completed foundational training in Google Cloud infrastructure, networking, security, and AI/ML service implementation.

Networking & Packet Analysis (Self-driven Project-Based Learning) **Feb 2026**

- Built a multi-threaded Deep Packet Inspection (DPI) engine in C++, implementing TCP/IP parsing, TLS SNI extraction, and flow-based traffic classification.
