Computer Science student at NMIMS Indore (CGPA: 8.4/10) specializing in ML systems and high-performance software. Building production-grade AI and networking tools with Python, C++, and LangGraph.

EDUCATION

NMIMS Indore | CGPA: 8.4/10
Computer Science and Engineering

Aug 2023 - May 2027
Indore, India

Progressive Education
Higher Secondary

Feb 2021 - Mar 2022
Indore, India

TECHNICAL SKILLS

- **Languages:** C++, Python, Java, JavaScript, SQL
- **AI/ML:** PyTorch, TensorFlow, LangChain, LangGraph, FAISS, Qdrant, Ollama
- **Web & APIs:** FastAPI, Flask, Streamlit, MERN Stack
- **Databases:** MongoDB, MySQL
- **Systems & Networking:** TCP/IP, PCAP, TLS, Multi-threading, Flow Tracking
- **Tools:** Git, GitHub, CMake, Docker, AWS, Google Cloud, Vercel

PROJECTS

CortexRAG – Agentic AI Knowledge Retrieval System | [LINK](#)

March 2026

- Built adaptive Retrieval-Augmented Generation system using LangGraph, FastAPI, and Qdrant for document-based and real-time query
- Implemented LLM query routing (Index / General / Search) with vector retrieval, relevance grading, and query rewriting.
- Developed Streamlit chat interface with MongoDB session memory and document upload pipeline.

FlowSentinel – Multi-threaded Deep Packet Inspection Engine | [LINK](#)

Feb 2026

- Designed and implemented a high-performance Deep Packet Inspection (DPI) engine in C++ to analyse and filter real PCAP network traffic.
- Designed scalable multi-threaded architecture (Reader → Load Balancer → Fast Path → Output Writer) using thread-safe queues and consistent 5-tuple hashing to ensure flow-level accuracy.
- Engineered TLS SNI extraction logic to classify encrypted HTTPS traffic (YouTube, GitHub, Google, etc.) without decrypting payloads.
- Developed rule-based filtering system supporting IP, domain, and application-level blocking with structured traffic analytics reporting.

Community Resource Sharing Platform | [LINK](#)

Jun 2025

- Built a full-stack MERN platform enabling borrowing and lending of community resources with authentication and user profiles.
- Implemented rating system, availability calendars, notifications, and database-backed transaction tracking.

Text-to-Image Generator (Stable Diffusion) | [LINK](#)

Sep 2025

- Developed Stable Diffusion text-to-image system using PyTorch with Flask interface.
- Optimized CUDA inference pipeline reducing generation latency by ~40%.

Handwritten Digit Recognition System | [LINK](#)

Sep 2025

- Trained a CNN on MNIST achieving 98%+ accuracy for handwritten digit classification.
- Built Tkinter GUI for real-time digit input and prediction with preprocessing and augmentation..

CERTIFICATES

Machine Learning I – Columbia+

Feb 2026

- Gained strong understanding of supervised learning, regression, classification, model evaluation, and core machine learning principles.

Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate

Oct 2025

- Demonstrated foundational knowledge of AI concepts, machine learning workflows, generative AI basics, and OCI-based AI services.

Cloud Computing – AWS (E&ICT Academy, IIT Kanpur)

Oct 2024

- Acquired practical exposure to AWS cloud architecture, compute services, storage solutions, and scalable infrastructure deployment.

Google Cloud Computing Foundations & Generative AI

Jun 2025

- Completed foundational training in Google Cloud infrastructure, networking, security, and AI/ML service implementation.
